## HOME LIGHT

**For being seen and found!**

## Introduction

**Congratulations for having chosen SOS Home Light.**

**SOS Home Light has been developed for a correct and oriented visibility in all (emergency) situations where you want to be seen and found.**

**When you need professional assistance (for example police, ambulance, fire department, doctor or public utility), it is very important that they arrive on site as soon as possible.**

**Many emergency services have a navigation system on their vehicles. Nevertheless, often they are not able to respect the prescribed times for arriving on site.**

**For the relief workers it can be very hard to quickly find the right place of an emergency call, and this can have different causes:**

- **House number or street name not clear or absent.**
- **Indications in new or complex residential areas not clear or absent.**
- **Difficulties to find the site in blocks of flats, galleried flats or apartment complexes.**
- **Poorly organized industrial sites, campings and yacht-basins.**
- **Isolated houses in sparsely populated areas.**

Especially at night, the "search" of relief workers can be frustrating!

With SOS Home Light you can report your exact position with a powerful light that the relief workers can see from a great distance.

They won't waste time looking for you. In an emergency situation, every second can make a difference!

## Positioning and use:

Decide where you want to position SOS Home Light.

Choose a position that is visible to the relief workers coming from the public way of access way, preferably near the main entrance of access door of the house of premises.

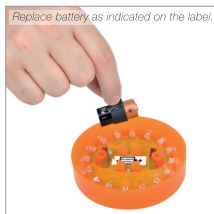

If you have an access lane or long garden in front of the house, position the lamp at the street side (fence, gate or tree).

Choose a fixed place in the house to keep SOS Home Light, preferably visible and of easy access near the door that leads outside.

Fix the two round plates with the delivered screws.

SOS Home Light is magnetic on the rear side, to be easily fixed on the plate.

*Batterie replacement:*

## Use:

Push on the green button to activate SOS Home Light.

You can chose one of the three signals:

- *1x push: the leds flash quickly).*
- *2x pushes: the leds flash slowly.*
- *3x pushes: all leds are on without flashing (less urgent or non urgent call).*
- *4x pushes: the lamp is off.*

## Attention!

**SOS Home Light Works with a 3V lithium battery, type CR123A.**

**To guarantee the correct functioning of SOS Home light, it has to be checked once a year.**

**If the leds become less powerful, the battery has to be changed!**

*ADVICE!*

*IF YOU WANT TO USE SOS HOME LIGHT IN AN EMERGENCY SITUATION, PLEASE TELL THE PERSON ON THE PHONE. THE RELIEF WORKERS WILL KNOW THAT WHEN THEY ARRIVE NEAR YOU THEY HAVE TO LOOK OUT FOR THE FLASHING LIGHT.*
